## SONGS FOR STRONG GIRLS

The product of performing parents, when it came time to go to college Taylor took her musical upbringing to the prestigious Peabody Conservatory of Music, earning a Bachelor's degree in Performance. "But I was a gearhead too. I went to a high school that focused on technology & engineering, where you learned how to solder and build stuff." To satisfy her urge to tinker, Taylor also found a niche and a degree in Recording Engineering, and soon after a Masters in the burgeoning field of Computer Music.

Just as doctors make the most demanding patients, Taylor also decided to record and mix her own tracks. Along the way, Taylor had the good fortune of hooking up with Grammy-award winning producer John Jennings. Jennings added his professional ear and additional guitar and percussion elements to take Taylor's songs to the next level.

Taylor's song styling influences range from classical to pop due in no small part to her training & background. She is anxious for the album's release and subsequent tour. "It's time to get out of the studio already and take it to the streets." And the airwaves.
